

Trading Guidelines

Customer concert :- **Stock Market is subject to market risk**, Stockopinion.in is not responsible for any of the trades executed by the client, basis stockopinion.in recommendations if client execute any trades, client will be solely responsible for their trades by themselves(in profit and loss). Read guidelines before executing the trades for effective results

Stockopinion.in recommends their client to strictly follow some of the risk management rules for better results

- Always take small trades to avoid big losses,
- Always exit the trades which are not profitable
- Always exit the trades where the loss is > 2.5% of the capital
- Always calculate the quantity to buy/sell before execute the order based on the capital, not on Margins provided by the brokerage firms.
- Avoid Averaging the quantity when losses, it would be better to exit the trade with small losses.
- Always do pyramiding of trades when in profits.
- Always use trailing stop loss to get better results
- use the formula to buy /sell the quantity ie.. (Loss bearing capacity / stop loss) to avoid big loss.
example - Capital 10000, Loss bearing capacity 5% which would be 500/- stop loss 5/- then quantity to buy / sell would be 500/5 which would be 50 quantity to execute.
- Always prepare for your profit and losses before taking the trade & at the beginning of the day to avoid surprise losses.
